execute maven test from cmd

- 1. add "maven-surefire-plugin" to pom.xml file
- 2. add profiles. In profiles provide different profile tags. profile contains id tag. profile tag contains <suiteXmlFile>. suiteXmlFile tag contains testng xml file.

```
→ I faced error while executing maven test from cmd.
                                                                                                                                                                                                                                                                                                              tools.javac.processing to unnamed module @0xe09f1b6 -> [Help 1]
